## INTRODUCTION

Green Audit is a process of systematic identification, quantification, recording, reporting and analysis of components of environmental diversity of various establishments. It aims to analyze environmental practices within and outside of the concerned sites, which will have an impact on the eco-friendly ambience.

It can also be used to determine the type and volume of waste, which can be used for a recycling project or to improve waste minimization plan. It can create health consciousness and promote environmental awareness, values and ethics. It provides staff and students better understanding of Green impact on campus. If self-enquiry is a natural and necessary outgrowth of a quality education, it could also be stated that institutional self-enquiry is a natural and necessary outgrowth of a quality educational institution.

The rapid urbanization and economic development at local, regional and global level has led to several environmental and ecological crisis. On this background it becomes essential to adopt the system of the Green Campus for the institutes which will lead for sustainable development and at the same time reduce a sizable amount of atmospheric carbon di-oxide from the environment.

In recent time, the Green Audit of an institution has been becoming a paramount important for self-assessment of the institution which reflects the role of the institution in mitigating the present environmental problems.

Therefore, the purpose of the present green audit is to identify, quantify, describe and prioritize framework of Environment Sustainability in compliance with the applicable regulations, policies and standards.

### **Main Objectives of Green Audit:**

- To examine the existing practices which can impact natural resources
- To review & update the Green practices in campus
- To formulate or update the institution's water & waste management protocols
- To generate a green database of the campus
- To maintain ambient environmental condition

## **General steps involved in Green Audit**

1. Systematic data collection
2. Documentation of activities
3. Regular monitoring
4. Providing standards and methods for improvement by establishing cost effective green action plan.

## **About the College**

K.L.E. Society's Raja Lakhamagouda Science Institute was established in 1935 that signified the renaissance of the mind to the seekers of knowledge, in the pre-independent North Karnataka. Initially, the Science course was introduced in Lingaraj Arts College. It was progressing by leaps and bounds; and subsequently in 1941, it was named as Raja Lakhamagouda Science Institute after the name of the munificent Sardar Raja Lakhamagouda Basavaprabhu Sardesai of Wantamuri, who had generously helped the Institute. Sir C. V. Raman, the Nobel Laureate inaugurated the degree course in science in 1944. Further, in 1958 the science wing was bifurcated from Lingaraj College as a full-fledged science institute.

R.L.S. Institute is a premier science college in a perfect ambience and with sufficient infrastructure for imparting science education. It had the honor of imparting instructions at Post-Graduate level in Mathematics, Chemistry and Physics from 1948 to 1957.

During the academic year 2009-10, our college was re-accredited by the National Assessment and Accreditation Council, Bengaluru, at 'A' grade with CGPA of 3.25. On the recommendation of Karnatak University, Dharwad, the Government of Karnataka granted permission to our college to start Post-Graduation courses in Physics and Mathematics from the academic year 2010-11. Accordingly, this facilitates the students from this part of North Karnataka to carry out Post Graduation in Physics and Mathematics.

Our Institution is conferred with Autonomous status in the academic year 2012-2013 by the UGC. It is approved by the Principal Secretary, Higher Education Government of Karnataka, Bengaluru. It is also approved by Rani Channamma University, Belagavi, our parent University.

During the academic year 2015-16, our college was re-accredited by the National Assessment and Accreditation Council, Bengaluru, for Third cycle after the conferment of Autonomy at 'A' grade with CGPA of 3.10.

From the academic year 2018-19 Post-Graduation course in Chemistry was started. We also have BCA Course. There are **Certificate courses**/value added courses as well as UGC Sponsored NSQF Certificate courses. The institute had the privilege of receiving a number of distinguished personalities including Jnanapeetha Award-winners, Scientists, Educationists, and Vice-Chancellors etc.

To carry out our activities in these transformative and competitive days, we have adopted a slogan, "Adapt and Excel". True to our slogan, we have been adjusting our activities with the changing situation and trying to excel in curricular and extra-curricular activities.

## Geography

## **Role of Management in Green Audit**

The management is very keen in monitoring green activities in its all campuses. The management has a regular evaluation process towards of green activities of the campus. The management encourages all the green initiatives and promotes all the awareness programs based on its green policies. The institute with the consent of management formulates the green policy based on green audit report.

## **Green monitoring cell of the Institute**

<b>Sl. No.</b>	<b>Name of the Faculty</b>	<b>Designation</b>
01	Shri H. N. Bannur	HOD English
02	Shri V. K. Ganiger	HOD Electronics
03	Smt. P. S. Melavanki	Lecturer, Botany
04	Smt. Alfaz Bagwan	Lecturer, Physics
05	Smt. Swapna Inamdar	Lecturer, Biotechnology
06	Smt. P. B. Dubale	Lecturer, Chemistry

## **The Green Audit Process**

1. Constitution of green monitoring cell with specific tasks & time schedule
2. Selection of the area on campus
3. Visiting the selected area to discuss about the audit process
4. Preparing the plan of action
5. Data collection pertaining to identified parameters for green auditing
6. Collection of background information on the identified activities & other parameters
7. Collection of green activities in the campus including flora, fauna, water usage and waste generation, etc.
8. Audit team visit to the campus
9. Data analysis and evaluation
10. Discussion on the findings
11. Report preparation

## **Onsite audit activities**

1. The preliminary visit and meeting with the campus authorities was the first step between the audit team and auditee
2. Site inspection for determining parameters for audit
3. Evaluation of collected information of the audit team
4. Meeting with the audit team for evaluation and clarifications
5. Meeting with the Principal, IQAC Coordinator & faculty members

## **Audit Process**

### **Inspection**

The visit in connection with the audit process to the campus had identified criteria for audit, parameters to be evaluated and time schedule of green audit. It included meeting with the Principal, IQAC Coordinator & the members of green monitoring cell. This enabled the auditing to gather all necessary preliminary information that is useful in preparing auditing questionnaire. The on-site audit team collected information based on the same.

### **Questionnaire**

The detailed questionnaire (Annexure I, II III & IV) was handled by audit teams and information was gathered. Information pertaining to green activities, water management &energy management was analyzed. This was based on the parameters identified. The questionnaire was comprehensive covering qualitative and quantitative dimensions.

### **Evaluation of documents and reports**

The audit visit to the campus evaluated documents and reports that are necessary for the audit process. This further strengthened the claims made by the campus authority on green operations in the campus. To generate future action plan, the audit team had a detailed discussion with different in house members in the institute and a concluding discussion session with Principal, IQAC coordinator and was done to finalize the plans.

## **ENERGY MANAGEMENT**

It is the process of tracking and optimizing energy consumption to conserve usage. There are few steps for the process of energy management: Collecting and analyzing continuous data. Set points and flow rates to improve energy efficiency. The power management system mainly consists of the maximum power point tracking (MPPT), the battery management and the power conversion stages. The MPPT stage attempts to obtain the maximum power available from the solar cell panels.

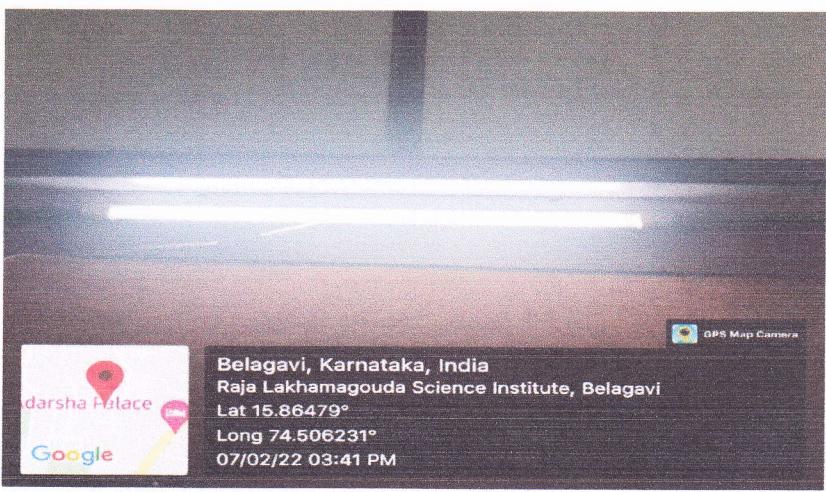

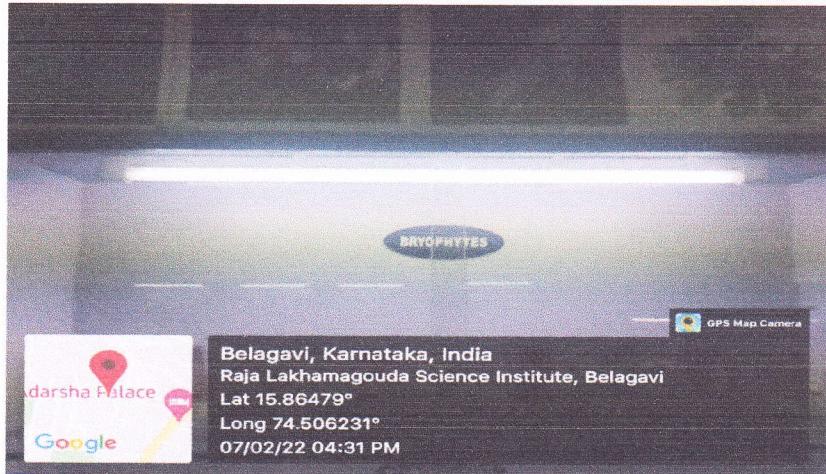

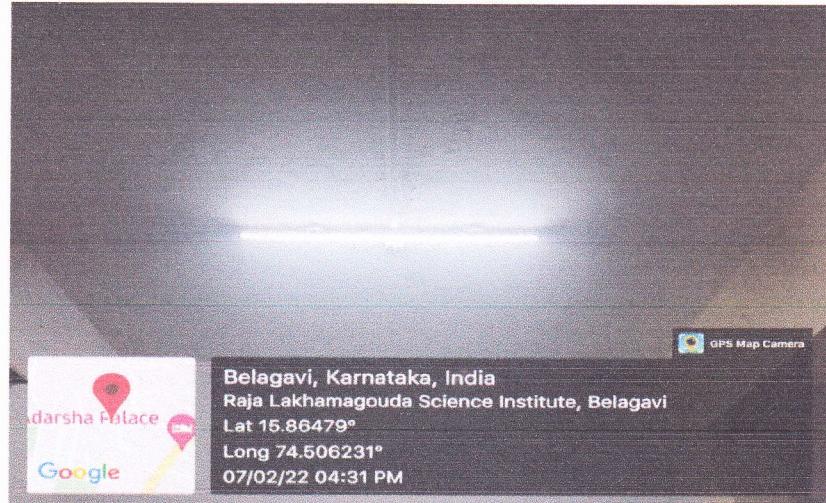

LEDs use 75% less energy than Incandescent bulbs because diode light is much more efficient, power-wise, than filament light. At low power levels, the difference is even larger.

### **• USE OF RENEWABLE ENERGY RESOURCES**

## SOLID WASTE MANAGEMENT

The college has a sprawling green campus and gives top priority to keep the campus clean and eco-friendly. Separate bins are kept at different places in the college campus. The solid waste is regularly collected by the garbage town council. Organic waste is converted into bio-fertilizer by the vermi-composting unit. After the vermi-compost is ready in due course it is harvested and used for plants on the campus. Dry waste mainly leaf litter is allowed to decompose systematically over a period.

### ○ Collection

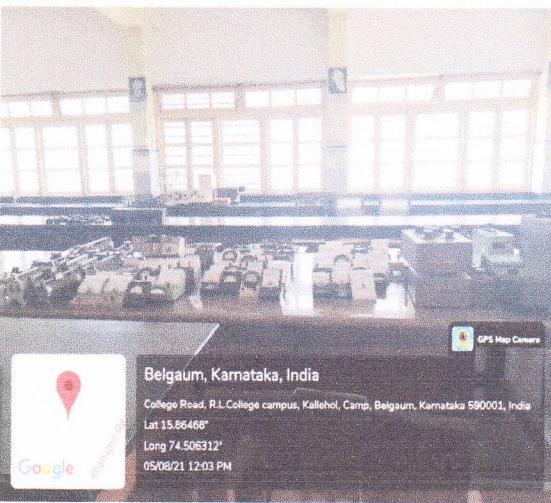

## ○ Vermicomposting unit

## E-WASTE MANAGEMENT

Every year various Departments of the Institution list outs non-working laboratory equipments, computers, monitors, printers, batteries etc, as a scrap materials. These equipments as e-waste will be kept in a common room & are sold on systematic basis following the rules of purchase committee. All the sold materials are then ruled out from the dead stock register for future records & for safe recycling. The college is planning to create an e-museum, where the damaged parts of computers and other devices shall be displayed, which will help the students to realize and understand the internal structure of the devices. The e-waste is scientifically carried out by licensed vendor.

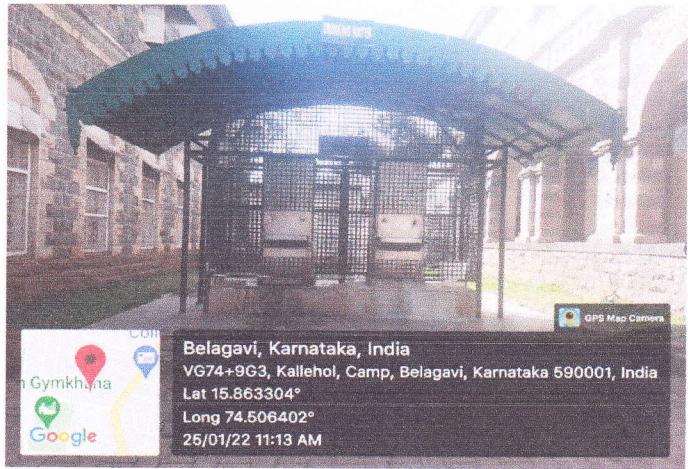

## **WATER MANAGEMENT**

Wells and other water resources in the college are well maintained. The college has rain water harvesting unit where in rain water is collected, stored & distributed at times. This will help to generate awareness about the importance of water conservation.

### **PHOTOS OF WELL(WATER RESERVOIR) ON THE CAMPUS**

**Water bottle refilling stations** - One of the most important and best green initiatives of our college campus is the installation water bottle refilling station. Plastic water bottles are one of the most hazardous items for the environment, so we promote students to use stainless steel water bottles & this would drastically reduce the use of disposable or single use plastic bottles.

## **Plastic free zone**

Plastic pollution is an environmental emergency. The impact that plastic usage has on ecosystems and the climate is disastrous. The environment is getting polluted at the never before pace sparing no mediums due to plastics. So it is becoming a key responsibility of every citizen of our country not just to "Say No to Plastics" but also to create awareness among the community as and make pollution free place for our future generations. This is why our involvement in the no plastic campaign significantly contributes towards creating a no plastic campus.

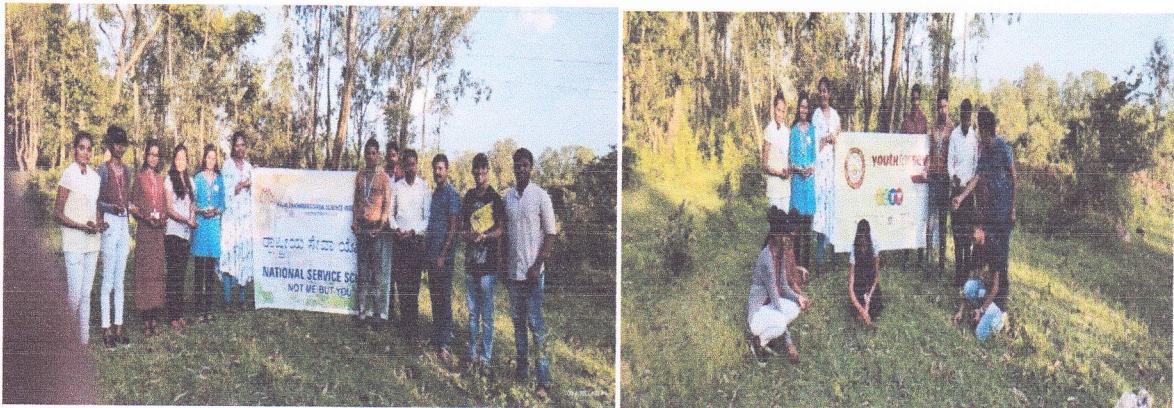

## **AWARENESS PROGRAMS**

**Major programs conducted in the campus during the last three years are:**

1. Nature camps
2. Observation of Environment Day, Ozone day etc.
3. Organizing Webinars/ Seminars and workshops on awareness and conservation of environment
4. Seed ball activity
5. Sapling, Planting etc.

## **SUMMARY**

Green audit at times makes the campus authority to understand the effect of implications towards greenery and conservation of natural resources. The management and other authorities are keen to make the campus a green one. We are making learning process by practical approach as faculty members of Green monitoring cell are aware about the commitment towards the Institution.

The campus thus functions as an eco-friendly approach that enables the student community to develop a genuine approach towards conservation of nature & the natural resources (Water, Energy etc.)

RLSI has conducted a “Green Audit” every year to monitor the green practices followed by the Institute and to understand whether the Institute is on the track of sustainable development. Hope the audit finding would help to implement better plan to execute & achieve a complete green campus.

## **CONCLUSION**

Our Institution puts into practice the optimization of energy consumption to conserve & improvise the energy efficiency. Maximum power point tracking stage attempts to obtain the power available from the solar cell panels. LEDs are used in place of Incandescent bulbs as these consume less energy and are more efficient. The solid waste management is done on regular basis. Vermicomposting unit has been well maintained for the production of Bio-fertilizers which is harvested and later used as organic manure for the plants on Campus. E-waste management is carried out by enlisting the non-functional electronic equipments and storing at a E-waste room and scientifically disposed in collaboration with licensed vendor. Water resource management is a part of planning, developing, distributing and managing the optimum use of water resources. Rain water harvesting units are well maintained & distribution of water is on need basis.

## **RECOMMENDATIONS**

1. Paperless documentation
2. Integrate Digitalization to improve efficiency & facilitate better informational exchange.
3. Set up waste water recycling unit where the recycled water can be used for gardening on the campus.
4. Install Chemical liquid wastewater treatment plant.
5. Organize Outreach Programmes for Public on awareness of environmental management system and sustainable practices.
6. Ensure participation of students and teachers in local environmental issues.
7. Frame an eco-friendly and energy saving Purchase policy.
8. Introduce eco-friendly add-on courses which are income generating to all interested students.
